

SINCE 1995

Quality Control System

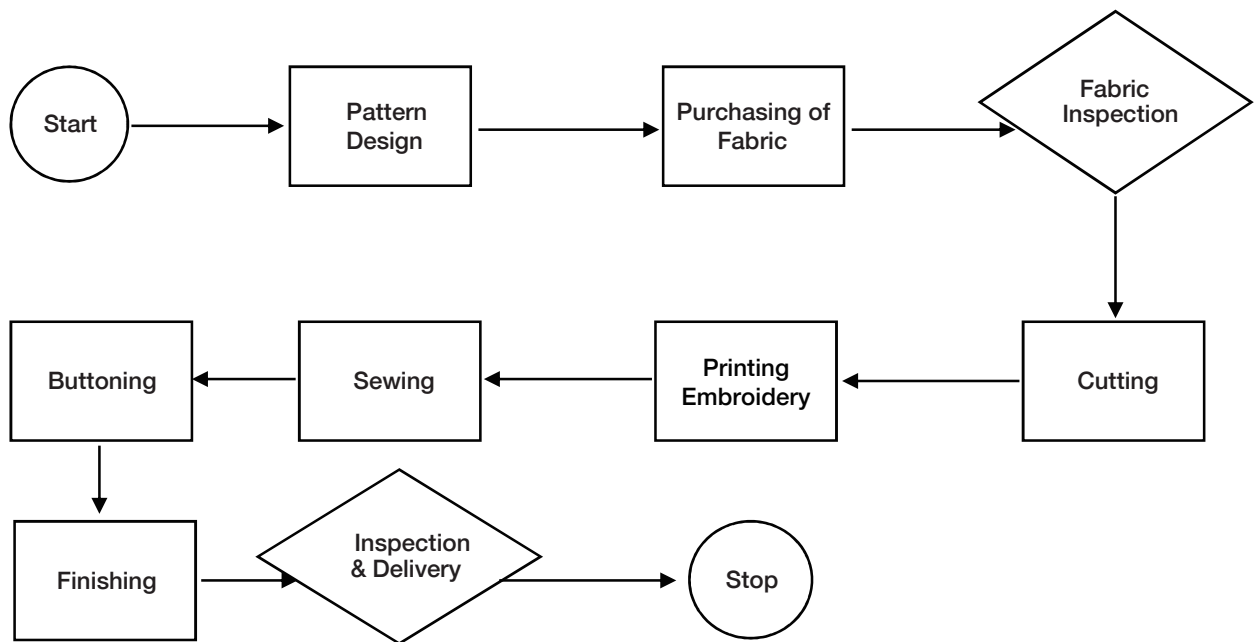

SECXON[®]
Clothing Manufacturer

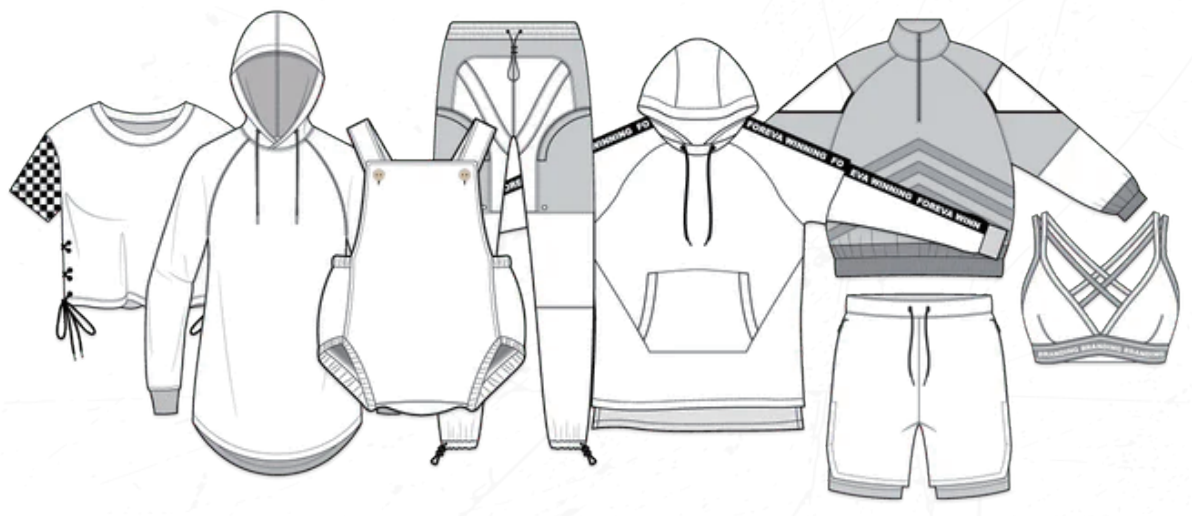

Quality Control System 1

The first stage - <1995 to 2008>
The beginning of garment production

In the initial development stage of the factory, it is necessary to accumulate experience, increase the factory strength and cultivate the talents it needs. Therefore, this stage needs to follow a simple and effective production system, which is conducive to improving production efficiency, and at the same time, the management will not be too overstaffed.

Quality Control System 2

2009 to 2018
Rapid development stage

Since China's accession to the World Trade Organization, China's manufacturing industry has developed rapidly, which also gives us the opportunity to contact more international brands and orders. With the industry experience since the factory was opened, we need to provide not only output, but also quality. Therefore, we have reformed our production system and added a number of quality inspection links to ensure that clothing finished products meet international standards, as shown below.

Quality Control System 3

2019 till now

Develop a multifaceted and comprehensive production system

With the continuous development of global economy, the world has become an indivisible whole, and the requirements for all aspects are getting higher and higher, especially for the manufacturing industry. While taking into account the production benefits, it is also necessary to consider the impact of production on the environment, whether the working environment is friendly to workers and other third-party factors.

Therefore, since 2019, we have integrated our own factory's years of industry experience and constantly modified it in combination with the elements required by the development of the times, including measures such as optimizing the supply chain, introducing higher level employees, and improving the factory equipment and production environment, so as to constantly meet the needs of customers and make contributions to the sustainable development of the world.

Overall Considerations of Quality Control System >> By SECXON 2019 Till Now

Quality First

The quality problem, you pay attention to it, the same as we are.
